New for 2018! Site of Care Alignment Program

CVS Specialty® and Blue Cross Blue Shield of Georgia (BCBSGa) will help those who receive infusion therapy find the most appropriate site of care. If you receive infusion therapy, CVS Specialty will contact you and guide you through steps you will need to take to utilize the most appropriate site of care.

**Examples of alternative sites of care for infusion therapy include:**

- Ambulatory Infusion Centers
- In-home (with optional nurse care assistance)

**Benefits of Choosing an Alternate Infusion Location**

Compared to the hospital infusion experience, home or infusion suites offer many advantages:

- Flexible scheduling
- Less time missed from work or school
- Reduced exposure
- Consistent products
- Avoided hassle of parking, weather, traffic, waiting, etc.
- Lower costs
- More personalized attention
