

Georgia Summit Workshops Related to the PSFIN V8 Project

Queries, SQRs, Crystals & nVision Development in the 8.9 World

PS Financials 8.9 is a web-based application that changes local development efforts. This workshop will be a hands-on guide to the new processes and procedures. You'll be able to test drive the web-based Query tool and execute modified locally developed SQRs, Crystals, and nVisions. You can bring screenshots or copies of your institution-created queries and retrofit them during this workshop. If you give us their names, we'll save your updated queries and port them to your upgraded system for UAT and Go-Live! You can also bring along your nVisions and get assistance on retrofitting these as well.

Date: Tuesday, September 18, 2007 at 1:00 - 5:00 PM

Financials V8 Certified Trainer Workshop

This two-hour workshop is intended for all PSFIN V8 Certified Trainers. We'll review and finalize your institution's Training Plan and answer any questions you may have. We'll also have an in-depth discussion concerning the implementation of End User training at your institution, which may begin with the initial release of UPK and other training materials in October. The workshop will be offered twice to allow every Certified Trainer the opportunity to attend. The two sessions are the same, so any Certified Trainers attending Georgia Summit should attend one of these sessions.

Date: Friday, September 21, 2007 at 8:00 - 10:00 AM

Security Workshop

We'll demonstrate User, Permission List, and Role Profile Maintenance. We'll also discuss ongoing, day-to-day security administration tasks, such as dealing with sign-on problems, distributing security responsibilities, maintaining security profiles, etc.

You'll learn to:

- 1) Create user lists
- 2) Maintain permission lists and role profiles
- 3) Troubleshoot sign-on problems
- 4) Maintain Security profiles
- 5) Maintain Query Security
- 6) Manage Workflow and Notification Options

We'll also cover some of the new features in 8.9, such as deleting inactive users that have been inactive a predetermined amount of days, and the ability to delete user profiles but keep the associated private queries.
