

Known Issue: KI9.2-35_PR Encumbrance Projection to General Ledger

UPDATED May 21, 2016

STATUS: RESOLVED

IMPACT: In Release 5.13, applied to production 5/21/2016, the Encumbrance Projection to the General Ledger Interface (BORIF007) process was updated so that it now produces the correct data.

**ORIGINALLY
POSTED:** March 10, 2016

An issue has been identified that causes the Encumbrance Projection to the General Ledger Interface (BORIF007) process to result in a mismatch of data when using Journal Line between the PERS_SERV_BOR table, the HR_ACCTG_LINE, and the generated journal entry it creates.

Functional Workaround:

ITS recommends that users do NOT use encumbrance projections from the PERS_SERV_BOR table for reporting purposes until further notice. You may continue to use the BORIF007 process to produce the encumbrance projection journal needed for financials.

Estimated Resolution:

A permanent fix for this issue is currently being developed and tested. ITS estimates the release of a fix prior to March 15th but an exact date has yet to be determined.
