

PeopleSoft HRMS Interim Release 3.08a

The purpose of this e-mail is to announce the completion of PeopleSoft HRMS Interim Release 3.08a, which includes the release of three SQRs. These SQR programs are now ready to run in your production database. Details on these SQR modifications:

IPEDS-S Report (PER040) – This program is retrofitted for V8.8. The program is also modified to include only employees whose EMPL_STATUS = Active, Suspended, or Work Break. Before the modification, the program included employees on Leave of Absence. The program is also modified to correctly display faculty on 9/10 month contracts. Before the modification, all faculty were displayed in the 11/12 month section of the report.

This report can be printed and reconciled with the BOR_IPEDS_S_REPORT query, a public query found on the production database. The following criteria must be corrected and the query saved before processing: EFFDT (change to 11/01/2004), EMPL_STATUS (only employees with EMPL_STATUS = A, S, and W should be included). If the query and the report do not agree, it may be an indication that all employees do not have a record in the CITIZENSHIP table.

Recruit Workforce Letter Extract (APP007) - The output file has been modified to 1)include Job Title in the file, and 2)sort the letters by applicant's last name. These changes are the result of model change request #590.

Blue Cross/Blue Shield Interface (BORI021) - This interface is modified to correctly ignore mailing addresses that are flagged as inactive. In this case, the address submitted to BCBS will revert to their most recent home address.

If you have any questions or issues, please contact the OIIT HelpDesk at 888-875-3697 or helpdesk@usg.edu.
