This kid-friendly interface was "product tested" with children, and includes only a few selected, subscription databases and Internet resources appropriate for elementary and middle school-aged children. The GALILEO Kids' Page is easy to access from home. Passwords are available from public school media centers and Georgia's public libraries.

SIRS Discoverer with WebFind

Encyclopaedia Britannica Online School Edition

Gale Kids InfoBits
SIRS Discoverer: In addition to full-text articles from more than 1,600 magazines, newspapers, and government documents, this database includes a robust picture collection, biographies, facts about countries, maps, an encyclopedia, and the World Almanac for Kids. Search results indicate reading level (general, easy, moderate, challenging).

Discoverer WebFind is an online database of reliable and credible Internet resources on most subjects appropriate for researchers in grades 1-9. WebFind web sites are carefully selected for their research value, credibility, age-appropriateness, and reliability. Each site is accompanied by a summary to help students and teachers decide on how they might use it.

Kids InfoBits is intended for use by students in kindergarten through fifth grade. Because of the wide age range represented in those grades, Kids InfoBits is designed to serve two distinct groups: children in kindergarten through grade two, and the more research-savvy students in grades three through five. The database includes full-text articles from nearly 100 age-appropriate magazines; reference content from Thomson Gale's reference books for children; more than 500 searchable full-color maps, and thousands of searchable pictures, charts, flags and graphs. The database features a Teacher Toolbox with downloadable templates on various curriculum-related topics.

Encyclopaedia Britannica Online School Edition provides teachers and students access to three complete encyclopedias that ensure consistency with classroom topics and age-appropriate language. The encyclopedias include: Encyclopædia Britannica, Britannica Student Encyclopedia, & Britannica Elementary Encyclopedia. The database also includes a Learning Materials section that incorporates more than 65 interactive guides to language arts, mathematics, and science into the classroom and a Resources for Teachers section that help incorporate the encyclopedia and the Internet into the curriculum. The Internet Guide, created by Britannica editors, includes sites chosen based on their educational value with an emphasis on curriculum-based content.

Searchasaurus & Middle Search Plus (EBSCOhost) - Two different article databases make up Searchasaurus: Primary Search for elementary school students and Middle Search Plus for middle school students. You'll also find a database of pictures, an encyclopedia, EBSCO's Animal Encyclopedia, and a dictionary. Use the Lexile Limiter to find appropriate materials based on grade-level reading ability.

Digital Library of Georgia - A gateway to multiple databases on Georgia's history and culture in digitized books, manuscripts, photographs, and images. DLG databases are great sources of primary documents and resources for studying history, social studies, and Georgia history and culture.

The New Georgia Encyclopedia provides access to authoritative information on people, places, events, history, and other topics about the state of Georgia. The site includes articles and images on every aspect of the state and includes links to related Internet sites.
