Resolved Issue: KI9.2-009-MFE: Tenure Data SetID Not Updating if Faculty Member has Been Employed at Multiple USG Institutions

**POSTED:** January 29, 2020

**STATUS:** Resolved

**Impact:** When a faculty member worked at other USG institutions, or had an active employment instance with multiple USG institutions, the SETID on the top of stack row was remaining on the new effective dated row and was not reflecting the SETID of the institution creating the tenure data record.

**Resolution Information:** A fix was applied to production on 1/21/2020 to correct this specific issue. It was tested against two open incidents and ITS Support was able to confirm that the SETID was correct based on the MFE practitioner entering the data.

Although this issue was corrected, we will be communicating a separate Known Issue that has occurred related to this fix. Communication will be sent out as soon as possible.

**Original Known Issue Details**

**Audience:** Faculty Events Practitioners

**Known Issue:** When a faculty member has worked at other USG institutions, or has an active employment instance with multiple USG institutions, the SETID on the top of stack row is remaining on the new effective dated row and is not reflecting the SETID of the institution creating the tenure data record

**Functional Workaround:** There is no functional workaround at this time.

**More Information and Support:** Contact OneUSG Connect Support at oneusgsupport@usg.edu.
