

## Resolved: Known Issue - KI9.2-115\_BP: HCM Import to Budget Prep Imports Deleted Job Rows

**UPDATED:** November 25, 2019

**STATUS:** Resolved

---

**RESOLUTION:** As of Release 5.50, dated November 25, 2019, the HCM Import process was updated to import Job and Position data directly from OneUSG instead of from copies of those tables in Financials that can sometimes get out of sync. This fix also adds messages where Positions are dropped during import due to data issues related to certain types of position transfers.

**NAVIGATION:** NavBar > Navigator > BOR Menus > BOR Budget Prep > Budget Prep Processing > HCM Import

**ISSUE:** The HCM Import process uses a copy of the Job table in Financials as a data source. When users create Job rows in OneUSG, the rows message to Job in Financials.

However, when users deleted rows in OneUSG these rows would still appear in the Job table in Financials. These deleted rows imported if the row for an employee had a greater effective date than the row which should have imported from OneUSG.

**ORIGINALLY POSTED:** March 27, 2019
