

Resolved Issue: KI9.2-002-CA: Applying Subsequent Direct Retros Causing Earnings to be Incorrectly Processed

POSTED: December 18, 2017

STATUS: Resolved

IMPACT: Practitioners should no longer experience earnings to be incorrectly processed when subsequent direct retros for a specific paycheck are applied.

Resolution Information: This issue was resolved with OneUSG Connect Release 2.0 on December 17, 2017 by changing the code in the Direct Retro programming.

Original Known Issue Details

Audience: Commitment Accounting/Financials Practitioners

Known Issue: Applying subsequent direct retros for a specific paycheck is causing earnings to be incorrectly processed.

If a direct retro has been processed for an entire check, with earnings, taxes and deductions having been retro-actively redistributed, and another retro is processed for only taxes and/or deductions, the earnings are incorrectly processed again.

The flags regarding the retro are not being processed correctly by the Commitment Accounting Actuals (PAYGL02) process.

Workaround: The workaround is to correct the incorrect earnings redistribution via a payroll adjustment in GeorgiaFIRST Financials.

This workaround results in GeorgiaFIRST Financials and OneUSG Connect being out of sync for earnings. Therefore, queries from OneUSG Connect will need to be adjusted for any of these payroll adjustments made in GeorgiaFIRST Financials.

If funding can be applied via Department Budget Earnings (DBE), fringe redirect functionality can be utilized to reduce the direct retros that are necessary.

Important Audit Information: Since the workaround will cause GeorgiaFIRST Financials and OneUSG Connect to be out of sync, institutions must keep supporting documentation of the reconciling items between the two systems.
