## **Creating Translations for Data Collections**

#### Introduction

Data Collections uses translation tables to translate institutional Banner values to standard Regents values. Cross-referencing of Banner and Regents values allows flexibility in Banner coding to meet institutional needs while allowing consistency in data collected for system reporting.

The method for entry of translation code data was implemented in fall 2001. This document has been updated to include a listing of current SOAXREF labels and GTVSDAX codes.

#### Description

All Banner institutions are required to translate institutional values to Regents values in Banner.

EDI Label Code values are found in the Data Source > SOAXREF Translation Code Section of the Data Element Dictionaries (DED) for each data collection and must be present on the EDI Verification Label Validation Page (STVXLBL).

Institutional codes must be translated to the Regents codes listed in the Valid Values Sections of the Data Element Dictionaries. These translations occur on the EDI Cross-Reference Rules Page (SOAXREF) or the Crosswalk Validation Page (GTVSDAX).

Accurate system-wide data are vital to support the University System of Georgia's research, reporting and decision-making capabilities. If a translation does not exist, then data are not collected as expected. Therefore, you must translate institutional codes to the Regents codes in Banner, even if the institutional Banner codes match the required Regents codes.

#### Purpose

This document provides instructions for creating the Regents translation tables on the EDI cross-reference tables in Banner for data collections.

#### Target Audience

Administrators and data entry staff responsible for creating and maintaining academic, facilities and financial aid data elements collected in the Academic, Facilities and Financial Aid Data Collections.

#### **More Information and Support**

For emergency, business interruption or other production down situations, immediately call the ITS Helpdesk 706-583-2001 or 1-888-875-3697 (toll-free within Georgia). For noncritical issues, submit a service request at <a href="https://usg.service-now.com/usgsp">https://usg.service-now.com/usgsp</a>. (Self-service support or service requests require a user ID and password; email <a href="https://usg.service-now.com/usgsp">helpdesk@usg.edu</a> for assistance.)

#### Resources

For information about ITS maintenance schedules or Service Level Guidelines, please visit <a href="https://www.usg.edu/customer services/service level guidelines">https://www.usg.edu/customer services/service level guidelines</a>. For USG services status, please visit <a href="https://status.usg.edu">https://status.usg.edu</a>.

## **EDI Verification Label Validation (STVXLBL)**

#### **Translation Label Codes**

Translation Label codes are found in the Data Source > SOAXREF Translation Code section of the Data Collection Data Element Dictionaries.

The EDI Verification Label Validation Page (STVXLBL) establishes the label codes for each translation. The Label Codes must be established on the EDI Verification Label Validation Page (STVXLBL) before used on the EDI Cross-Reference Rules Page (SOAXREF).

## **EDI Cross-Reference Rules Page (SOAXREF)**

#### **Cross-Reference Rules**

Use the EDI Cross-Reference Rules Page (SOAXREF) to translate the EDI value to the Banner value. For data collections, this page establishes the translation of institutional Banner values to standard Regents values.

The **Electronic Label** field contains the labels previously entered on the EDI Verification Label Validation Page (STVXLBL).

The **Electronic Value** field contains the Regents value for the translation. These codes are listed in the Valid Values Sections of the DED and/or the Cognos Reference Code Reports.

The **EDI indicator** denotes codes that are used by electronic data exchange (EDI) processes for transmitting data.

The **Web indicator** is used for codes that will display on the Self-Service Banner webpages. The Web indicator is not used for data collection.

The **XML** indicator should be checked for PESC/XML standard codes. These are items such as the Postsecondary XML Transcript that uses a standard established by the Postsecondary Electronics Standards Council (PESC) to transmit data via XML. The XML indicator is not used for data collection.

The **Banner Value** field contains the institutional value for the translation for codes in use at the institution. The Description field contains a brief description of the translation. Use a variation of the element title listed in the DED for easier reference.

You must use the Electronic Qualifier when your institution has more than one institutional Banner value for the same EDI Value/Regents value. Use a qualifier when you need a many-to-one translation.

For example, the Electronic Label RGTRSTS and Banner Values CC, DC, DW and DD map to Electronic Value CNTENRLN. The numeric qualifiers 1, 2, 3 and 4 are used to map all four institutional values to the Regents EDI Value of CNTENRLN. Qualifiers may be any alphanumeric value (i.e., A, B, C and D or N1, N2, N3 and N4) as long as a unique qualifier is used for each Banner value.

NOTE: Multiple Banner Values may be cross-referenced to a single Electronic Value, but a single Banner value may not be mapped to multiple Electronic Values. (i.e., Banner Value CC in the example above may not be mapped to both CNTENRLN and CNTENRLY.) This will result in an error in the Academic and Facilities Inventory Data Collections Data Collection ETL.

## **Procedural Steps to Create EDI Translations**

#### Set Up Valid EDI Codes on STVXLBL

To set up valid Regents codes in Banner, complete the following steps:

- Access the EDI Verification Label Validation Page (STVXLBL).
- If the desired EDI Label Code does not exist, insert a row and enter the EDI Label Code for the element as listed in the Data Element Dictionary (DED).
- Enter the Description for each element. Use a variation of the element title listed in the DED for easier reference.
- Save the entries by clicking the SAVE button.

#### Translate Institutional Codes to Regents Codes on SOAXREF

To establish the translation of institutional codes to Regents codes, complete the following steps:

- Access the EDI Cross-Reference Rules Page (SOAXREF).
- Double-click in the Cross-Reference Label field to display a list of EDI Label Codes previously entered on STVXLBL.
- Select the label from the list and click OK.

- The Cross-Reference Label field will be populated with the selected EDI Label code.
- Click Go.

- Enter the Regents value as listed in the DED Valid Values field.
- The EDI flag should be checked.
- Enter your institutional code in the Banner Value field.
- Enter the Description as listed in the DED Valid Values field.
- Use the Electronic Qualifier field when multiple institutional Banner codes map to one Regents code. In this example, Banner Values BV3 and BV4 are both mapped to Regents value RV3.
- Save the entries by clicking the SAVE button.

## **Crosswalk Validation (GTVSDAX)**

#### **Address Crosswalks**

Institutions may collect and use multiple student address types including mailing address, permanent address, billing address, diploma mailing address, etc. Address types are defined on the Address Type Code Validation page (STVATYP). For data collection purposes, the Permanent Address, Enrolled Student Current Address and Graduation Address types must be translated.

#### Translate Institution Codes to Regents Codes on GTVSDAX

To establish the translation of institutional address codes to Regents codes, complete the following steps:

Create address type validation codes on the Address Type Code Validation page (STVATYP).

 Establish the address hierarchy on the Crosswalk Validation page (GTVSDAX). In order to collect all of the required addresses, hierarchies must be established for the following Internal Codes:

RGTADDR: Permanent Address

RGTMADD: Graduation Address

o RGTCRADDR: Enrolled Student Current Address

For each address Internal Code listed above, the following data must be entered on STVSDAX:

o Internal Code: RGTADDR, RGTMADD or RGTCRADDR

Sequence: Numerical sequence number

Group: ADDRESS

External Code: Mailing address type code from STVATYP

o Description: Description that corresponds with the internal codes listed above

For illustration purposes, if an institution collected two permanent addresses with address type codes PR and PA, the following entries would be made:

When inserting new rows on GTVSDAX, an error may be encountered when an attempt to save the record is made while the Sys field is not populated. The error text will display "Invalid Sys value. This field is required." The Sys field does not need to be populated for the purposes of this business practice. Perform the following steps to avoid encountering the error and successfully insert and save new rows:

1. On GTVSDAX, perform a Record > Copy function. This will copy the existing row data into the new row.

- 2. Manually replace the copied data with your new data (Code, Sequence, Group, External Code, Description). Leave the Sys field blank.
- 3. Save the record.

#### **Email Crosswalks**

Institutions may collect and use multiple student email address types including home email address, other email address, parent email address, etc. Email address types are defined on the E-mail Address Type Validation page (GTVEMAL). For data collection purposes, the Enrolled Student Current Email Address and Graduation Email Address types must be translated.

#### **Translate Institutional Codes to Regents Codes on GTVSDAX**

To establish the translation of institutional email address codes to Regents codes, complete the following steps:

 Create email address type validation codes on the E-mail Address Type Validation page (GTVEMAL).

- Establish the email address hierarchy on the Crosswalk Validation page (GTVSDAX). In order to collect all of the required addresses, hierarchies must be established for the following Internal Codes:
  - RGTEMAIL: Graduation Email Address.
  - RGTCREMAIL: Enrolled Student Current Email Address
- For each address Internal Code listed above, the following data must be entered on STVSDAX:
  - Internal Code: RGTEMAIL or RGTCREMAIL
  - Sequence: Numerical sequence number
  - Group: EMAIL
  - External Code: Email address type code from GTVEMAL
  - o Description: Description that corresponds with the internal codes listed above

For illustration purposes, if an institution collected two permanent addresses with email address type codes HOME and PERS, the following entries would be made:

## **Appendix A: SOAXREF Translation Labels**

Academic Data Collection (ADC)		
Data Element Number	Data Element Name	SOAXREF Translation Label
