# Degree Works Quick Reference Guide bannerextract.config

> This Quick Reference Guide is a brief summary to assist you in updating and maintaining your Degree Works environment. Additional training through the Ellucian Customer Center or GeorgiaBEST is also available.

What is bannerextract.config?

- The bannerextract.config file contains SQL that is used to bridge Student Goal Data from Banner to Degree Works

- The baseline bannerextract.config SQL delivered with your Degree Works environment should be reviewed and customized for your site.
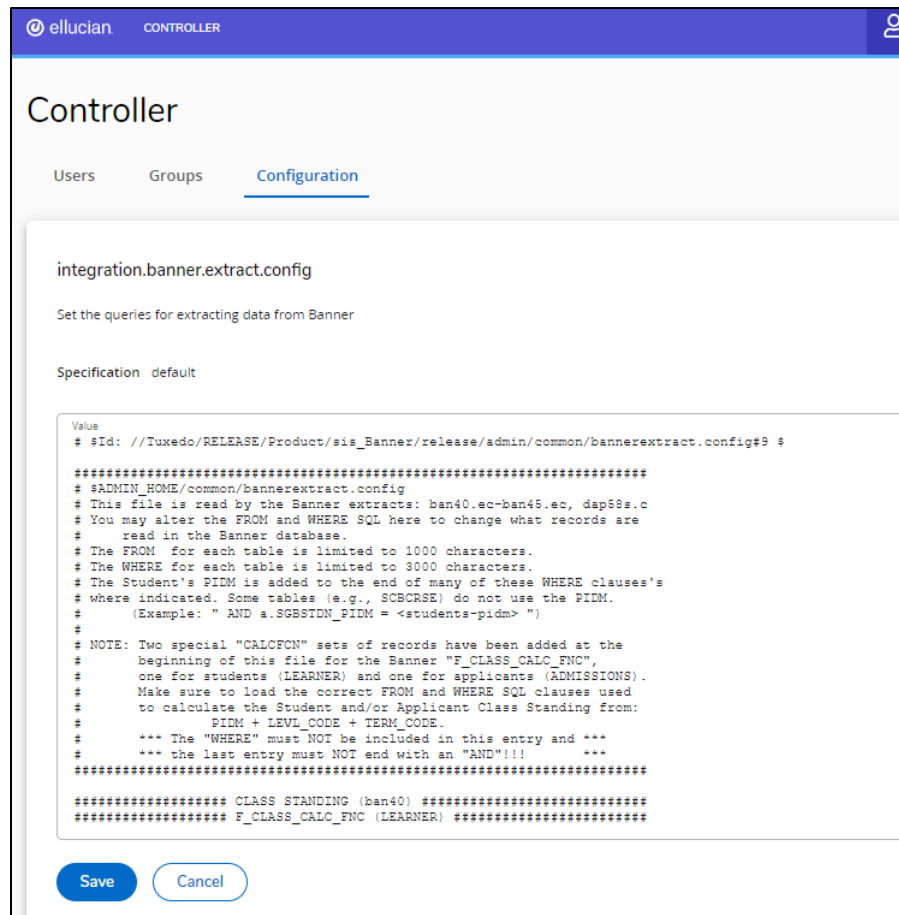

How do I access the bannerextract.config file?

- The file can be retrieved from the command line at: $ADMIN_HOME/common/bannerextract.config

- Alternatively, the file is available through DWShell Shepentry System Settings/Controller Configuration.
  - o Search integration.banner.extract.config

  - o Open the setting and select the edit/pencil icon.

- o A window will open displaying the file. While this window allows editing capabilities, it is best practice to copy and paste the file into a text editor.

- o Save a local copy of the file, and then make your edits.

- o Once your updates and edits are complete, copy and paste back into the editing window.

- o Select 'Save', and your bannerextract.config file is now updated. This updated file will be used to identify student goal records in future extracts.

Best Practice
Save a local copy of the initial bannerextract.config file as a text file. Make updates and edits and save the new version locally before copying and pasting back into the setting.
