Math 1111 College Algebra

COURSE DESCRIPTION: This course provides an in-depth study of the properties of algebraic, exponential and logarithmic functions as needed for calculus. Emphasis is on using algebraic and graphical techniques for solving problems involving linear, quadratic, piece-wise defined, rational, polynomial, exponential, and logarithmic functions.

- A. <u>Review Topics</u>. Upon entering College Algebra, the student is expected to possess an understanding of Elementary and Intermediate Algebra. At MOST 20% of class time will be spent reviewing the following topics in order to reinforce the students' understanding of them.
 - 1. Sets and Set Operations
 - 2. Special Products and Factoring
 - 3. Fundamental Operations with Polynomial and Rational Expressions
 - 4. Integral and Rational Exponents and Radicals
 - 5. Linear Equations in One Unknown with Applications
 - 6. Linear Inequalities in One Unknown
 - 7. Quadratic Equations in One Unknown
 - 8. Rectangular Coordinates and Graphs of First- and Second- Degree Equations
 - 9. System of Two Linear Equations in Two Unknowns
 - 10. Ratio and Proportion
- B. <u>Uniform Requirements</u>. Between 50% and 70% of class time will be spent covering the following topics:
 - 1. Relations, Functions, and their Graphs
 - 2. Quadratic and Rational Inequalities
 - 3. Linear Functions of a Single Variable with Applications
 - 4. Quadratic Functions of a Single Variable with Applications
 - 5. Systems of Equations with Applications
 - 6. Polynomial Functions of a Single Variable (including Graphs, Remainder and Factor Theorem, etc.)
 - 7. Exponential and Logarithmic Functions with Applications
- C. <u>Additional Topics</u>. Even though each of the following areas is appropriately placed under the title "College Algebra," it would be unrealistic to expect that they would be covered in a <u>minimum level</u> College Algebra course. However, between 10% and 50% of class time will be spent covering one or more of these areas:
 - 1. Absolute Value Equations and Inequalities
 - 2. Fundamental Operations with Complex Numbers
 - 3. Matrices and their Applications
 - 4. Arithmetic and Geometric Sequences and Series with Applications
 - 5. Mathematical Induction and the Binomial Theorem
 - 6. Variation with Applications
 - 7. Permutations, Combinations and Probability
 - 8. Linear Programming
 - 9. Conic Sections

For suitable textbooks, please consult the texts spreadsheet on the ACMS website.

Date: February, 2014
